

E³UDRES² Intensive I Living Labs @ St. Pölten UAS 2023

Sustainable learning environment

Educational Entrepreneur: Janja Dörsch

Title of the I Living Lab	How might we create a sustainable learning environment that promotes well-being, fosters collaboration and honors the ecological limits of our planet?
Challenge	Given the architectural and budgetary constraints of the campus, we want to create a thriving learning environment that is resilient through its adaptability to climate change and resource efficiency, based on the principles of doughnut economics.
Goal	As an active participant, you will gain insights into working in a cross-functional, international team. By fostering curiosity, you will develop your problem-solving skills and learn how to apply the Design Thinking methodology. By supporting each other, we will create a learning environment that will help us all thrive.
